

FIRSTBANK DIGITAL FACTORY

Stakeholder Brief: Executive Sponsor

Subject: NovaLend CBN Deadline - Strategic Launch Plan

Focus: Market Share, Regulatory Survival, and ROI

The Situation & Decision

We face a strict 6-week CBN reporting deadline, but our current beta shows an unsustainable 14% default rate and 66.1% of users rejecting our offers. To protect the bank's capital, we will launch a controlled version of the product that prioritizes loan safety over total loan volume. We will achieve this by strictly limiting who gets approved and giving good borrowers more control over their loan terms

Execution & Outlook

To hit our 6% default target, the system will automatically decline the highest-risk applicants before an offer is made. To fix the 66.1% drop-off, we will let approved users easily adjust their loan size and repayment date to fit their actual needs. If they still reject the offer, a quick prompt will ask them why, giving us the exact customer feedback we need to safely scale and grow revenue in Q4.

FIRSTBANK DIGITAL FACTORY

Stakeholder Brief: Compliance & Risk

Subject: NovaLend CBN Deadline - Default Mitigation Plan

Focus: Default Rate Reduction, Portfolio Safety, and CBN Guidelines

The Situation & Decision

The beta data confirms that our 14% default rate is caused by adverse selection, our current flat pricing repels good borrowers while attracting high-risk ones. To protect bank capital and successfully meet your mandated 6% default target ahead of the upcoming CBN audit, Product is intentionally overriding short-term loan volume growth to enforce strict risk controls.

Execution

1. **Automated Risk Filtering:** We are implementing a hard background cutoff that automatically declines the bottom quartile of credit applicants before any loan offer is generated, instantly removing high-risk exposure from the portfolio.
2. **Personalized, Risk-Gated Offers:** Loan offers and pricing are now strictly tied to each user's verified risk profile. This eliminates adverse selection by ensuring high-risk borrowers are no longer underpriced, aligning every loan with safe lending standards.
3. **100% Fee Transparency:** To ensure complete alignment with CBN guidelines, all fees, interest calculations, and repayment totals are fully visible by default on the main screen—with zero hidden toggles or buried terms.

FIRSTBANK DIGITAL FACTORY

Stakeholder Brief: Engineering

Subject: NovaLend MVP - 6-Week Scope Lockdown
Focus: Scope Reduction, Technical Feasibility, and Core Deliverables

The Situation & Decision

We are operating under an immovable 6-week deadline to deliver a CBN-compliant release. To hit this window without compromising quality, we are ruthlessly cutting scope and deferring long-term initiatives—specifically excluding any machine learning model overhauls. Instead, our engineering focus is locked entirely on four core deliverables: the automated risk cutoff backend, the post-verification risk-tiered pricing engine, the decline-reason capture logic, and the frontend amount-slider/tenor-toggle UI.

Technical Directives

- **Frontend Architecture & Type Safety:** Build the mobile interface using Expo and React Native with strict TypeScript typing across all components and state models to eliminate runtime errors.
- **Fluid State Recalculations:** Power all real-time fee, interest, and repayment date recalculations to ensure buttery-smooth 60fps UI transitions as users adjust inputs.
- **Gesture-Safe Offer Presentation:** Implement the offer screen to guarantee native-feeling touch-event delegation and flawless gesture-conflict resolution between inner content scrolling and sheet collapse.
- **Data Pipeline Integration:** Ensure all user actions including slider adjustments, tenor selections, and 1-tap decline-reason feedback are properly structured and routed to the data warehouse for Q4 machine learning training.
